Low Level Light Therapy

FOR FERTILITY

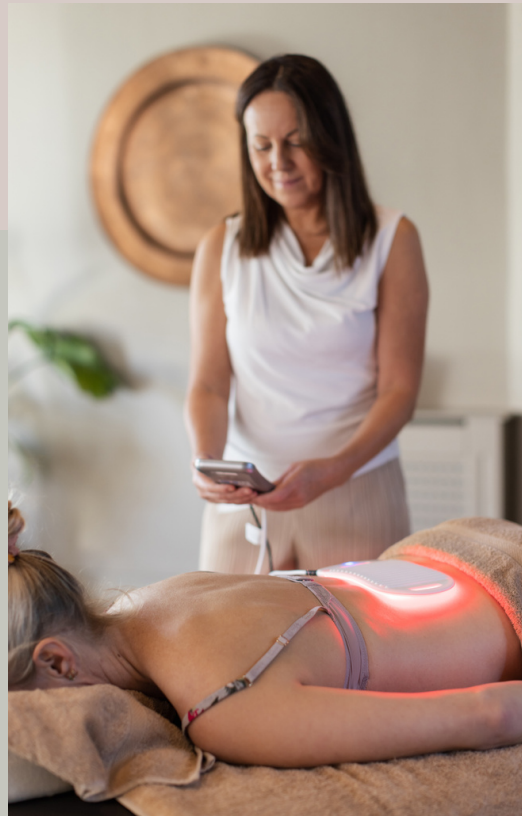

Red/Infrared and Low Level
Laser Therapy to optimise
fertility

About LLLT

Preliminary studies have shown promising results to optimise female and male infertility with LLLT. A Japanese study used LLLT in women with low AMH levels that improved pregnancy and live birth rates.

LLLT in fertility activates mitochondrial function, improves pelvic blood flow, reduces oxidative damage, pelvic pain and inflammation

Vision

expertly tailored treatments to utilise traditional and modern therapies and technologies to optimise reproductive health

Who is it for?

Low ovarian reserve

Poor egg quality

women with advanced reproductive age

pelvic pain

hormonal imbalances

pelvic inflammatory conditions
